

Mirapoint RazorGate® - Series 8

Simplified Messaging Security, Delivering Best-in-Class Email Hygiene, Carrier-Grade Reliability, and the Industry's Lowest TCO in a Scalable Appliance.

APPLIANCE BENEFITS

- Simplicity of design facilitates installation and deployment in minutes
- Minimal administration reduces resource needs
- No known exploits - A hardened Messaging Operating System™ (MOS) optimized for performance, security and reliability provides unrivalled peace of mind
- Proven 99.999% reliability
- Designed from the ground up for security

THE CHALLENGE

Today's organizations cannot function without a highly reliable email system and most email networks in use today are under constant attack. Internet borne threats, such as spam and viruses, continue to plague organizations while new and more sophisticated dangers like phishing, fraud and confidential data leaks challenge the integrity of the email network. Discover how to protect your email infrastructure by eliminating these escalating and ever-changing threats, without increasing administrative complexity.

THE RAZORGATE SOLUTION

RazorGate® is an appliance-based email security gateway that was designed from the ground up to provide unparalleled protection for your network. RazorGate appliances seamlessly protect and route email to Mirapoint Message Server or any other email server. It combines the industry's fastest MTA (Mail Transfer Agent) with best-of-breed antispam, antivirus, and content inspection technologies to achieve catch rates of 99%. RazorGate is the most scalable, powerful, and flexible way to prevent threats from entering or leaving your email network. Its simple design makes it easy to install and manage, keeping resource requirements to a minimum and ensuring the industry's lowest TCO.

FEATURES AND BENEFITS

Connection-Level Controls

RazorGate's Reputation Services block up to eighty percent of threats at the network edge before network bandwidth, storage, processor and administration resources are wasted. Reputation Services uses an advanced, hosted detection center to ensure that email sent from suspicious IP addresses are instantly flagged. Flexible policies specify appropriate actions to stop attacks at the edge, supplementing core antispam services.

Sender Policy Framework (SPF) prevents spammers from sending email from forged addresses, combating phishing and fraud.

Anti-Spam

RazorGate's Antispam technology uses information collected globally from network probes to identify spam and virus outbreaks, and is particularly

effective against image spam. Based on real-time outbreak information it delivers virtually no false-positives, works with any type of message content and language, and effectively distinguishes between legitimate bulk mailing and spam.

RazorGate also provides MultiScan where multiple anti-spam engines are combined to provide complementary best-of-breed filtering and policy tuning to minimize false positives/negatives.

End-User Spam Controls

RazorGate's innovative Junk Mail Manager (JMM) creates a personal quarantine for detected spam, relieving the user's inbox of unwanted messages, while still making the messages easily accessible. JMM allows for individual settings on quota, retention time, and delivery of summary digest to the users' inbox rather than a one size-fits-all approach. JMM can also leverage your existing SAN investment, making it the most cost-effective quarantine solution available.

Virus Protection

Customers require multiple, best-in-class anti-virus technologies in order to repel today's blended attacks of phishing, rapidly mutating viruses, dangerous malware payloads, and hacked websites. RazorGate is the only appliance solution with zero-hour malware detection and quarantine, early-warning outbreak detection, and dual pattern-based scanning technologies.

Content Compliance

RazorGate has an embedded Policy Engine which allows for the flexible creation of both individual and group-based policies to govern acceptable content for email messages and attachments. It can help identify and enforce acceptable use email policies including a multitude of attachment types to help prevent inbound or outbound email policy violations.

Monitoring and Effectiveness Reporting

RazorGate has centralized reporting tools, providing a configurable dashboard of real-time monitors for all RazorGate appliances in your environment, that will also distribute configurable reports on-demand or as a scheduled event. With log management, e-discovery tools, and custom defined SNMP alerts, you can be notified immediately when an important event occurs.

MIRAPOINT'S MESSAGING SUITE

RazorGate is part of a suite of solutions for enterprise messaging needs which includes:

- Message Server, the industry's leading reliable, secure, and scalable messaging appliance with email, group calendar, and addressbook
- RazorSafe, an email archiving appliance that reduces email management costs and supports compliance and e-discovery requirements
